Professional Summary

DevOps Engineer with 3+ years of experience in designing, deploying, and supporting **cloud-native, microservices-based systems**. Proficient in **Java, Python, Spring, Jenkins, Docker, Kubernetes**, and **AWS**, with strong expertise in **CI/CD automation**, infrastructure as code (IAC), and production deployments. Demonstrated success in streamlining deployments, strengthening system reliability, and enhancing operational visibility.

Technical Skills

Languages: Java 8, Python 3.x, SQL, Shell Scripting

Frameworks & Middleware: Spring, Apache Camel, Apache Kafka

DevOps & Cloud: Jenkins, Docker, Kubernetes, AWS, Terraform

Databases & Messaging: IBM MQ

Tools & Platforms: Git, Linux, Maven, Grafana, Prometheus

Concepts: CI/CD, Infrastructure as Code (IaC), Monitoring & Alerting, Microservice architecture.

Professional Experience

Software Development Engineer – DevOps

Jun 2023 – Present

EquiLend

- Spearheaded **CI/CD pipeline** automation using **Jenkins, Docker, and Kubernetes**, slashing deployment times by 60% and increasing deployment frequency by 150% for the engineering team.
- Packaged and rolled out **microservices-based** applications on **Kubernetes (AWS EKS)** and **docker**, ensuring high availability and scalability.
- Pioneered **Spring Cloud Config Server** to centralize configuration management across microservices, automating 90% of deployments and reducing manual setup from 2 hours to a single-click process.
- Automated stop/restart workflows for 20+ microservices using Jenkins pipelines and shell scripts, improving system resilience and maintenance efficiency.
- Engineered monitoring dashboards in **Grafana** with **Prometheus** as the data source to track 25+ critical business processes and generate timely alerts.
- Architected and deployed application infrastructure on **AWS** and led migration from on-premise systems to **AWS EKS**, enabling 50% projected infrastructure cost reduction and improved **disaster recovery**.
- Implemented **Infrastructure as Code (IaC)** with **Terraform** reducing infrastructure costs by 25% and provisioning time by 40% while maintaining security.

Software Development Intern

Jan 2023 – Jun 2023

EquiLend

- Completed 6 weeks of intensive training in **Java, Spring, Apache Camel, and SQL**, and developed an integration focused demo application based on microservice architecture.
- Mastered the security lending process lifecycle, specifically focusing on the efficient loading of 3 core entities that is **securities, accounts, and inventory**.

Programming Head

Aug 2020 – Jan 2023

D.Y. Patil Robotics and AI Club

- Led a team of 10+ developers to design robotics and AI-based systems, including omnidirectional and quadruped bots.
- Built **ML-based** hand sign recognition (10,000+ images dataset) and face recognition systems using computer vision.

Projects

Face Recognition Tool | GitHub

Python, OpenCV, Tkinter

- Developed a face recognition system using **OpenCV** that generated 128-D facial embeddings for accurate identity matching.

Stock Price Prediction | GitHub

Python, NumPy, Pandas, Flask

- Deployed a web application using **Flask** and **ML models** to predict future stock prices with ~93% accuracy.

Education

Bachelor of Engineering in Computer Science

Apr 2019 – Apr 2023

Savitribai Phule Pune University | GPA: 8.65/10.0

Certification

- 30 Days of Google Cloud Program (2021)
- AWS Cloud practitioner
